# Exotic Wood Decking

Denser and more durable than softwood, exotic hardwoods make the ideal luxury decking solution. In addition to their natural beauty and longevity, Brazilian hardwoods produce natural oils that repel wood boring insects like termites

## IPE DECKING

Brazilian Ipe is extremely weather-resistant and its rich brown color can last for over 50 years with regular cleaning and resealing. This wood's natural oils make it resistant to insects, rot and mildew but Ipe's claim to fame is its fire resistance.

## GARAPA DECKING

Brazilian Ash or Garapa comes in golden brown shades providing a lighter color than Ipe. While it displays the same longevity, fire, weather, rot and insect-resistance as Ipe it is more budget friendly.

*Garape and Ipe decking are available in  
5/4"x6"x8'-20' deck boards*
